

# Views from the clinical audit community

Why are we witnessing a drop in positivity towards clinical audit from those who complete the CASC annual survey?

## Background and analysis

Data is derived from the question: 'Do you feel more positive or negative about clinical audit than you did a year ago?'. The possible answers were: 'more positive', 'more negative' or 'neither positive or negative'. The graph above shows the differential between the percentage answering 'more positive' and 'more negative' from 2010 to 2017.

In 2010 59.2% answered 'more positive' with only 11.8% answering 'more negative' = 47.4 differential. Over time the proportion of 'more positive' answers has eroded while the 'more negative' responses have increased. In both 2016 and 2017 the proportion of 'more negative' answers exceeded 'more positive'.
